

## Definitions set prereqs

| Term                  | Notation       | Example(s) | We say in English ...                                                                            |
|-----------------------|----------------|------------|--------------------------------------------------------------------------------------------------|
| all reals             | $\mathbb{R}$   |            | The (set of all) real numbers (numbers on the number line)                                       |
| all integers          | $\mathbb{Z}$   |            | The (set of all) integers (whole numbers including negatives, zero, and positives)               |
| all positive integers | $\mathbb{Z}^+$ |            | The (set of all) strictly positive integers                                                      |
| all natural numbers   | $\mathbb{N}$   |            | The (set of all) natural numbers. <b>Note:</b> we use the convention that 0 is a natural number. |

## Definitions functions prereqs

| Term                 | Notation                                 | Example(s)                                                                                                                | We say in English ...                                                                                                                                                                                                                     |
|----------------------|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| sequence             | $x_1, \dots, x_n$                        |                                                                                                                           | A sequence $x_1$ to $x_n$                                                                                                                                                                                                                 |
| summation            | $\sum_{i=1}^n x_i$ or $\sum_{i=1}^n x_i$ |                                                                                                                           | The sum of the terms of the sequence $x_1$ to $x_n$                                                                                                                                                                                       |
| piecewise definition | rule                                     | $f(x) = \begin{cases} \text{rule 1 for } x & \text{when COND 1} \\ \text{rule 2 for } x & \text{when COND 2} \end{cases}$ | Define $f$ of $x$ to be the result of applying rule 1 to $x$ when condition COND 1 is true and the result of applying rule 2 to $x$ when condition COND 2 is true. This can be generalized to having more than two conditions (or cases). |
| function application | $f(7)$<br>$f(z)$<br>$f(g(z))$            |                                                                                                                           | $f$ of 7 <b>or</b> $f$ applied to 7 <b>or</b> the image of 7 under $f$<br>$f$ of $z$ <b>or</b> $f$ applied to $z$ <b>or</b> the image of $z$ under $f$<br>$f$ of $g$ of $z$ <b>or</b> $f$ applied to the result of $g$ applied to $z$     |
| absolute value       | $ -3 $                                   |                                                                                                                           | The absolute value of $-3$                                                                                                                                                                                                                |
| square root          | $\sqrt{9}$                               |                                                                                                                           | The non-negative square root of 9                                                                                                                                                                                                         |

**Pro-tip:** the meaning of two vertical lines  $| \quad |$  depends on the data-types of what's between the lines. For example, when placed around a number, the two vertical lines represent absolute value. We've seen a single vertical line  $|$  used as part of set builder definitions to represent "such that". Again, this is (one of the many reasons) why it is very important to declare the data-type of variables before we use them.
